

Frequently Asked

QUESTIONS

What are the side effects of whiteboard marker ink?

While generally safe for normal use, whiteboard marker ink can be an irritant to eyes and skin if directly contacted. Inhaling fumes, especially in poorly ventilated areas, can also cause mild respiratory irritation. For utmost safety, avoid direct contact and ensure good ventilation in closed spaces.

Is whiteboard marker safe?

Yes, the ink in these 8 Colour Magnetic White Board Markers is non-toxic and meets relevant safety standards for UK use. However, keep children and pets away from open markers and avoid ingesting the ink. Always supervise young children using whiteboard markers.

Is dry erase marker same as whiteboard marker?

Yes, these terms are interchangeable! These 8 Colour Markers are both dry erase and whiteboard markers, meaning their ink dries quickly on the whiteboard surface and easily wipes clean with the built-in eraser or a dry cloth.

What are magnetic dry erase markers?

These markers have magnets attached to the body, allowing them to conveniently stick to any metal surface, including your whiteboard. The 8 Colour Magnetic White Board Markers boast this feature that keeps your pens within easy reach and preventing them from rolling around or getting lost.

How long do whiteboard markers last?

The lifespan of whiteboard markers depends on factors like usage frequency, storage conditions, and brand quality. These 8 Colour Markers are built to last with high-quality ink and durable pen tips. Proper storage helps, so keep them capped and upright when not in use. Typically, they can last for months with regular use.
